

Meeting Minutes #3:

US Census Review, Next Project Update, Technology Document Questions

November 16, 2017

1 ATTENDEES

Carl Niedner

Chester Ornes

Kien Tran

Brian Wiltse

Meeting Type: Face-to-Face

Location: Levrum downtown office

Time: 10:30am 11:30am

2 SUMMARY

In today's meeting we went over the US Census project Brian and Kien have been working on and gave Carl and Chester a rundown of how our program worked and what the API calls looked like. Carl and Chester were impressed with the progress and proposed the next phase is to use census tract with appropriate shapefile to create a program that would allow the user to get information about the area around their desired location. Finally, Brian and Kien were able to ask questions about their Technology Review document.

3 ACTION ITEMS

- Brian and Kien must research on US Census Tract and if there is a way to retrieve that information. They must also look into shapefile and how to create this program for the team. For now, the scope will just be in Charlotte, NC. They will report back to Carl what they have found by the next meeting.
- Chester will be sending to Brian and Kien a csv file that they created a while ago that can be used as an example.
